Executive Summary

Watson & Associates Economists Ltd. (Watson) was retained by the Town of Halton Hills (Town) to prepare a long range financial plan (LRFP) and model for the 2018-2027 forecast period.

The objectives of the plan were

- to develop a financial planning model that could be used to update the Town's existing financial policies, optimize funding sources and measure progress towards long-term financial objectives; and
- to provide a model with "what if" scenario sensitivity and financial impact analysis, that could accommodate organizational changes, develop/optimize capital funding strategies as program and project levels, integrate with financial programs, and provide system-based reporting;

This report assesses projected capital and operating net expenditures, measures debt capacity utilization, reserve/reserve fund sustainability and Town's tax rate impacts based on the anticipated development and proposed capital funding plan.

Two scenarios were developed within the LRFP, the first (i.e. Scenario 1), represents the Town's current 10-Year plan and generally reflects the Town's 2018 Capital and Operating Budget's, with revisions for actuals and anticipated changes to the base budgets. The second (i.e. Scenario 2) builds on Scenario 1, addressing the capital and operating budget impacts for changes in services/programs and provisions for additional asset management funding. It is not intended that these be mutually exclusive scenarios, but rather to have Scenario 2 measure the impacts if all additional initiatives were undertaken within the 10-year forecast period.

Over the 10-year forecast period, the Town's population is forecast to increase by approximately 17,100 persons to 78,800 by 2027. The 2.5% average annual population growth will be facilitated by the construction of approximately 8,200 additional residential dwelling units. Moreover, the Town's employment base is forecast to reach approximately 28,300 employees by 2027¹, which represents an increase of 10,725 employees within the Town. This employment growth is expected to add approximately 1.1 million square metres of non-residential gross floor area to the Town's non-residential building inventory. Based on market value assessment samples for

¹ excluding no fixed place of work and work at home employment.

comparable developments and the Town's current property taxation policies, the additional residential and non-residential development is estimated to increase the Town's weighted property assessment for taxation purposes by approximately \$8.8 billion by 2027, an average annual growth rate of 4.2%.

The following table summarizes the capital expenditure forecast, capital funding plan, and net operating expenditures for each scenario over the 2018-2027 forecast period.

Table E-1

Town of Halton Hills

Comparison of Capital Plan and Net Operating Expenditures

for Scenarios 1 and 2

	Scenario 1	Scenario 2
	(in \$millions)	(in \$millions)
Capital Expenditures (2018-2027)		
-Growth Related		
-Non-Growth Related	\$172.5 (54%)	\$196.1 (47%)
Total Capital Expenditures	<u>\$135.2 (46%)</u>	<u>\$216.9 (53%)</u>
	\$307.8	\$413.1
Capital Funding Plan (2018-2027)		
-Development Charges Reserve Fund	\$61.2 (20%)	\$61.5 (15%)
-Development Charges Debt	\$24.3 (8%)	\$30.5 (7%)
-Reserves/Reserve Funds	\$199.6 (65%)	\$147.7 (36%)
-Debt	\$11.4 (4%)	\$161.5 (39%)
-Other Sources	<u>\$11.3 (4%)</u>	<u>\$11.8 (3%)</u>
Total Capital Funding	\$307.8	\$413.1
Annual Operating Expenditures (2027)		
-Service/Program Related	\$10.6 (56%)	\$17.2 (59%)
-Facility Related	<u>\$8.4 (44%)</u>	<u>\$11.9 (41%)</u>
Total Annual Operating Expenditures	\$19.0	\$29.0
Annual Operating Revenues (2027)		
-Service/Program Related	\$1.5 (71%)	\$2.7 (69%)
-Facility Related	<u>\$0.6 (29%)</u>	<u>\$1.2 (31%)</u>
Total Annual Operating Revenues	\$2.1	\$3.9
Annual Net Operating Expenditures (2027)	\$16.9	\$25.1

In addition to funding the increases in capital and net operating costs, contributions to reserves and reserve funds were increased to achieve average Greater Toronto Area municipal levels by 2027. Incremental transfers to reserves and reserve funds over the forecast period total \$26.7 million under Scenario 1 and \$8.5 million under Scenario 2. Under both scenarios by 2027, capital reserves/reserve funds balances would approximate \$540 per capita, and operating reserves \$20% of net levy.

Town's property tax rates have increased by approximately 3.9% annually over the past three years (2016-2018), with greater increases in the two years prior of approximately 4.9% annually. To measure the fiscal impacts, the LRFP forecast Town property tax rate increase of 3.9% annually for each Scenario. Maintaining average annual property tax rates and end-of-term reserve/reserve fund sustainability balances, provides for the measure of fiscal impacts on the basis of increased debt and it's implication on the Town and Province's debt capacity limits. The Town's self imposed debt policy limits annual debt repayment to 10% of the net levy. The Province imposes a debt limit for annual debt repayment at 25% of own source revenues.

As summarized in Figure E-1, planning under Scenario 1 debt servicing as a percentage of net levy decreases from 9.7% in 2018 to 2.5% by 2027. Under Scenario 2, the capital fund mix increases the use of debt financing, as such, annual debt servicing costs reach 12.5% of the net levy at 2027. However, the Town would still be within the Province's annual debt repayment limits, at 2.1% of own source revenues under Scenario 1 and 10.4% under Scenario 2.

Comparison of Fiscal Impacts for Scenarios 1 and 2 14% 14% **Debt Required** \$192 million 12% 12% 10% 10% Debt Capacity (% of Net Tax Rate Increase 8% 8% 6% 6% 4% Debt Required 2% 2% \$36 million 0% 0% 2014 2015 2016 2017 2018 2019 2020 2021 2022 2023 2024 2025 2026 2027 Annual Tax Rate Increase (Scenario 1 & 2) — Annual Tax Rate Increase (Actual) Debt Capacity Utilization (Actual) •••• Debt Capacity Utilization (Scenario 1) Debt Capacity Utilization (Scenario 2) Debt Capacity Utilization Limit

Figure E-1
Town of Halton Hills
Comparison of Fiscal Impacts for Scenarios 1 and 2

In conclusion, the Town's financial plan and associated policies are achievable within a 3.9% annual Town property tax rate increases based on the underlying growth assumptions. Depending on the strategic initiatives chosen by Council (i.e. all or some items identified in Scenario 2), this level of property tax support would allow the Town to

Page (iv)

fund future service demands, increase sustainability and funding for municipal assets and services, and potentially improve the municipalities level of indebtedness (as measured by the Town's policy of annual debt repayment relative to the net levy).

1. Introduction

1.1 Terms of Reference

Watson & Associates Economists Ltd. (Watson) was retained by the Town of Halton Hills (Town) to prepare a long range financial plan (LRFP) for the 10-year forecast period (2018-2027) and to develop a LRFP model for use by the Town in their ongoing fiscal planning decisions. The objectives of the undertaking was to develop a financial planning model that could be used to update the Town's existing financial policies, optimize funding sources and measure progress towards long-term financial objectives. To this end the model as also developed to provide:

- "What if" scenario sensitivity and financial impact analysis;
- Built-in flexibility to accommodate organizational changes and system-based reporting on the modeled information;
- Ability to:
 - Analyze capital funding/usage at a micro level and on an individual project basis;
 - o determine optimal financing mix to support growth;
 - o optimize debt; and
 - o integrate key financial programs.

This report, which addresses the 10-year LRFP, assesses projected capital and operating net expenditures, measures debt capacity utilization, reserve/reserve fund sustainability and Town's tax rate impacts based on the anticipated development and proposed capital funding plan. The financial plan has been prepared using the LRFP model developed for the Town.

1.2 Study Process

Watson worked extensively with Town staff throughout the organization in assessing background material, building the LRFP model, developing and testing assumptions, and reviewing the financial plan findings. Summarized in Figure 1-1 is the process that was followed in preparing the LRFP.

1.3 Overview of the Long Range Financial Plan Model

Figure 1-2 provides a schematic overview of the methodology undertaken herein, which is described as follows:

 Blue Boxes – denote the anticipated development within the Town to the year 2027. The anticipated development is based off of the growth forecast in the Town's 2017 D.C. Background Study (D.C. Study), with adjustments for the updated land budget for the Vision Georgetown Secondary Plan Area. Within the LRFP model, residential and non-residential development was assessed for the following areas within the Town:

- o Vision Georgetown Secondary Plan Area
- o Georgetown (Excl. Vision Georgetown)
- o Acton
- o Hamlets
- Premier Gateway 401 Corridor

Moreover, the types of residential and non-residential development were forecast to include

- Residential Low density, medium density and high density units
- o Non-Residential Industrial, commercial and institutional.
- Purple Boxes denote the incremental capital infrastructure needs to service the anticipated development. The capital requirements to support the increase in servicing needs (roads, fire, recreation and parks, libraries, etc.) were developed and validated with input from various departmental staff. These needs were derived from the Town's D.C. Background Study, 2018 Capital Budget, 10-year forecast and specific adjustments provided by staff. The capital project timing was modified from that contained in the D.C. Background Study and 2018 Capital Budget to reflect the updated timing for anticipated development arising from the updated land budget for Vision Georgetown and the Premier Gateway 401 Corridor. The resultant capital needs and timing are summarized in Section 3.1 of this report. Financing methods for funding the infrastructure are discussed in Section 3.2. The use of debt as a financing source is measured relative to the Town's borrowing capacity and internal debt repayment policy limits to assess the annual repayment limit impacts. Moreover, in light of the Town continuing to develop its asset management plan, the financing plan seeks to provide for reserve/reserve fund sustainability relative to Greater Toronto Area (G.T.A.) municipal comparators.
- Green Boxes denote the additional operating expenditures anticipated over the
 forecast period. These costs have been assessed on two different bases:
 incremental operating costs related to infrastructure, and incremental operating
 costs related to the increase service/program demands of population and
 employment growth. The former identifies the specific operating costs
 anticipated to be incurred as additional infrastructure (i.e. roads, facilities, etc.) is
 constructed, purchased or assumed. The latter identifies service/program
 expenditures which are linked to population and employment growth.
- Red Box denotes anticipated non-tax operating revenues commensurate with forecast growth. Similar to the assessment of operating costs, incremental nontax operating revenues are assessed in relation to additional infrastructure and population and employment service/program demands.

- Orange Boxes denote incremental property tax revenues. Additional
 assessment is anticipated as residential, industrial, commercial and institutional
 development occurs over the forecast period. This new assessment gives rise to
 additional property tax revenue, which has been forecast based on current
 market values for comparable development types. For market value assessment
 purposes, these development include various types of built form (e.g. low density
 dwelling units with different lot frontages) as detailed in Section 2.4 herein. The
 forecast incremental market value assessment was converted to incremental
 weighted assessment based on the Town's current taxation ratios and policies.
- Yellow Box denotes the overall financial impact on Town property taxes, and other financial measures such as debt capacity utilization and reserve/reserve fund sustainability.

C:\Watson\TOHH LRFP Report.docx

1.4 Long Range Financial Plan Scenarios

The LRFP has been prepared to consider two scenarios for the 10-year forecast period.

1.4.1 LRFP Scenario 1

Scenario 1, is representative of the Town's current 10-Year plan and generally reflects the Town's 2018 Capital and Operating Budget's, with revisions for actuals and anticipated changes to the base budgets. In this regard, the following revisions have been made to the Town's base budgets:

Capital Budget Items

- \$4.0 million in additional costs for Vision Georgetown Community Centre Land costs:
- Accessible bus purchase in 2018 of \$61,500; and
- Additional expenditures for Fire Communication Services in 2018 of \$33,000.

Operating Budget Items

- \$75,000 annual operating expenditure increase for youth programs;
- \$108,000 annual operating expenditure increase related to the provision of Activan Services, arising from in-house service operation;
- \$224,000 annual operating expenditure decrease for Fire Communication Services, arising from contractual service agreement with the Town of Milton;
- \$33,000 annual operating expenditure decrease arising from the removal of vacancy rebates currently being provided;
- \$40,000 annual operating revenue decrease from other parties for senior's recreation service needs; and
- A 74% increase in budgeted annual planning application revenues as a result of the Town's recently approved planning applications fees by-law.

1.4.2 LRFP Scenario 2

Scenario 2 builds on Scenario 1, addressing the capital and operating budget impacts for changes in services/programs and provisions for additional asset management funding. It is not intended that these scenarios be mutually exclusive, but rather to have Scenario 2 measure the impacts if all additional initiatives identified below were undertaken within the 10-year forecast period. In addition to the changes identified above, the following additional items have been included under this scenario:

Capital Budget Items

- Construction of the Gellert Community Centre Phase 2 (2023) for \$11.5 million;
- Construction of the Georgetown and Acton Indoor Pool projects (2020) for \$10.5 million;
- \$1.0 million annual capital expenditures between 2019-2027 for potential needs arising from the forthcoming IT Strategy Plan;
- Town Hall expansion in 2023 for \$2.5 million;
- Expansion of the Activan transit service and the additional of universal transit services (vehicles, transfer hubs, facilities, etc.) between 2019-2027 for \$36.0 million;
- Sale of Town owned lands (\$11 million) and facilities (\$1.2 million) between 2018-2019;
- Redemption of the Local Distribution Company (LDC) promissory note for \$16.5 million in 2021; and
- \$33.1 million in funding of asset management needs to achieve recommended annual funding levels.

Operating Budget Items

- Incremental operating and maintenance expenditures resulting from expanded transit services;
- Eight additional full-time equivalent (FTE) staff in 2019 beyond forecast growthrelated needs in Scenario 1; and
- \$665,000 reduction in annual dividend revenue related to the redemption of the LDC promissory note.

2. Anticipated Development

2.1 Introduction

This chapter summarizes forecast population, housing, employment and gross floor area (G.F.A.) for the Town over the 2018-2027 forecast period. Additional details regarding population, housing and non-residential growth are provided in the Town's D.C. Background Study. The residential and non-residential forecast herein was prepared by Watson based on the following information:

- The Town's D.C. Background Study;
- Update Land Budget for the Vision Georgetown Secondary Plan Area (June 8, 2018); and
- Discussions with Town staff regarding the anticipated type, location and timing of development.

The following sections summarize the residential and non-residential growth forecast used herein.

2.2 Population and Housing Growth, 2018-2027

Table 2-1 summarizes the Town-wide population and housing growth forecast for the forecast period 2018-2027. Over this forecast period:

- The Town's population is forecast to increase by 17,134 persons from 61,555 in 2017 to 78,789 in 2027 (2.5% annual growth rate);
- The number of total housing units to be developed over the forecast period is 8,216 units Town-wide, or 822 units annually;
- 41% of the new housing development is forecast to occur within the Vision Georgetown Secondary Plan Area, commencing in mid-2021; and
- New housing development density types are forecast to include 38% low density units, 29% medium density units, and 33% high density units.

2.3 Non-Residential Growth, 2018-2027

Summarized in Table 2-2 is the Town's employment and non-residential G.F.A. growth forecast for the period 2018-2027. Over this forecast period:

- The Town's employment base is forecast to reach 28,278 by 2027 (excluding no fixed place of work and work at home employment), which represents an increase of 10,725 employees within the Town;
- Approximately 67% of the incremental employment is forecast within the industrial sector, with 27% within the commercial sector, and 6% within the institutional sector;
- The majority of industrial employment growth over the forecast period it expected to occur within the Premier Gateway 401 Corridor area (i.e. 7,138 employees or 79% of forecast industrial employment growth).
- The Town's non-residential forecast will add approximately 1.1 million square metres of G.F.A. to its base non-residential building inventory by 2027;
- Approximately 87% of forecast non-residential G.F.A. has been allocated to the industrial sector, followed by 10% to the commercial sector, and 3% to the institutional sector; and
- Forecast non-residential gross floor area has been derived based on the following assumptions regarding incremental floor space per employee. These factors are consistent with the Town's D.C. Background Study:
 - o Industrial 131 sq.mt./employee
 - o Commercial 37 sq.mt./employee
 - o Institutional 47 sq.mt./employee.

2.4 Assessment Growth, 2018-2027

The market value assessment assumptions presented in Table 2-3 were applied to the forecast residential and non-residential growth summarized in Sections 2.1 and 2.2 herein.

Table 2-3

Market Value Assessment Assumptions for New Development
RESIDENTIAL

Avereage Assessment per Unit	Area 2 - Vision Georgetown Secondary Plan	Area 3 - Georgetown (Excluding Vision Georgetown)	Area 4 - Acton	Area 5 - Hamlets	Area 6 - Premier Gateway 401 Corridor
Low Density	655,287	655,287	522,944	659,000	-
Medium Density	377,736	407,600	402,913	402,913	-
High Density	295,774	295,774	300,583	366,850	-

NON-RESIDENTIAL

Avereage Assessment per sq.m.	Area 2 - Vision Georgetown Secondary Plan	Area 3 - Georgetown (Excluding Vision Georgetown)	Area 4 - Acton	Area 5 - Hamlets	Area 6 - Premier Gateway 401 Corridor
Industrial Commercial Institutional	2,218 3,514	2,218 3,636 783	1,255 2,744 1,025	1,274 4,390 1,269	2,764 4,264 1,241

These market value assessment assumptions were surveyed from the Town's assessment records of comparable new developments matching the various development types. Recognizing the market differences between the various geographic areas of the Town, the market value assumptions have been prepared with regard for the individual areas being assessed in the LTFP model and the anticipated mix of residential and non-residential development types within the respective areas.

As noted in Section 1.3, in forecasting the market assessed values for the various types of residential and non-residential development, Table 2-4 summarizes the types of built form resulting from the survey. These development types recognize market value and tax policy differences in respect of lot size, ownership structure and land use.

Incremental property tax revenues from new development are calculated based on weighted taxable assessment. As such, the forecast incremental weighted taxable assessment is determined by multiplying the incremental market value assessment, calculated above, by the Town's 2018 tax ratios to determine the incremental weighted assessment for tax purposes.

Condo	

Applying the Town's 2018 tax ratios by tax class produces incremental weighted assessment of \$8.8 billion by 2027, or 4.2% growth rate in average annual weighted assessment. The details of the weighted assessment forecast for the forecast period are provided in Table 2-5. The forecast of assessment assumes a six-month lag between occupancy and assessment for residential development, and a one-year lag for non-residential development outside of the Premier Gateway 401 Corridor area. For development within the Premier Gateway 401 Corridor area, a 1.5-year lag between occupancy and assessment has been assumed based on recent experience by the Town.

In addition to adding incremental weighted assessment to the Town's current assessment base, new development activity will also decrease certain tax classes as land uses are converted. For example, as non-residential lands develop, the current assessment for vacant land will decrease as a result. Similarly, for residential development, as new building activity occurs within the Vision Georgetown Secondary Plan Area, the existing farmland assessment within that area will be reduced. In

addition, to these assumptions, the following assumptions have also been used in preparing the forecast of weighted taxable assessment growth:

- High density residential development will be assessed in the "New Multi-Residential" tax class;
- Commercial and industrial development will be assessed as occupied or vacant land based on the same distribution of the current tax base:
 - o Commercial 98.4% occupied and 1.6% excess land
 - o Industrial 94.6 occupied and 5.4% excess land;
- As the current assessment base is being phased in over the 2017-2020 period, the assessment base has been increased by 11.2% to reflect the full market value assessment. Forecast existing and new assessment at full market values allows the property taxes to be assessed without the impact of increased taxation revenue from phase-in of assessment; and
- For property tax calculation purposes, the assessment growth in any given year is added to the assessment base in the following year.

3. Capital Costs and Capital Funding Plan

3.1 Capital Costs, 2018-2027

As part of the process for this financial evaluation, detailed discussions were undertaken with Town staff and the Town's D.C. Background Study and 10-year Capital Budget and Forecast were consulted to identify future capital needs. The capital program includes growth-related capital needs, i.e. capital projects identified in the Town's D.C. Background Study to support the increase in needs arising from new development, and non-growth capital needs, i.e. capital projects required to sustain or improve services to the existing community.

The growth-related capital program was reviewed with Town staff in regards to the benefitting service areas, timing, and amount of growth triggering the need for service. The latter is provided to allow the timing of growth-related capital projects to adjust with the pace of development. All capital expenditures have been forecast assuming 2% annual capital cost inflation.

A summary of the growth-related and non-growth related capital expenditure forecasts for Scenarios 1 and 2 are presented in Table 3-1 and 3-2 respectively. As noted earlier, the Town is currently undertaking a comprehensive Asset Management Plan to identify the long-term lifecycle capital needs of the Town. Preliminary findings indicate the annual spending for capital replacement should be increased to \$20 million per year for long-term sustainability. As such, Scenario 2 includes a provision for the inclusion of an incremental \$33 million in capital spending to achieve the \$20 million annual capital replacement spending level by 2027.

The capital expenditure forecast for the 2018-2027 forecast period under Scenario 1 totals \$307.8 million. Based on the anticipated development and capital timing identified within the D.C. Background Study, approximately \$172.5 million (or 54% of total capital expenditures) are for growth-related capital projects. The non-growth related capital expenditures total \$135.2 million (46% of total capital expenditures).

Under Scenario 2 the total capital expenditure forecast is \$105.3 million greater (or 34% higher) than in the capital forecast under Scenario 1, and totals approximately \$413.1 million. The growth-related capital projects represents \$196.1 million or 47% of the total capital needs. The increase in growth-related capital project costs is due to the inclusion, in the forecast period, of the Gellert Community Centre Phase 2, Acton Indoor Pool, and Georgetown Indoor Pool projects. Non-growth-related capital projects total

Additional Capital Needs	48,629,758	94,500	4,160,070	3,886,838	13,046,208	12,947,582	5,214,766	2,372,602	1,436,326	1,315,479	4,155,388
AMP/Lifecycle Expenditures	33,156,183	-	-	-	-	-	2,906,001	4,966,922	4,527,008	8,976,337	11,779,914
Total	413,066,288	16,557,400	27,137,406	39,789,793	37,636,573	39,693,398	69,961,878	38,899,100	56,172,442	51,678,458	35,539,839

\$216.9 million or 53% of the total capital program needs. In addition to the \$135.2 million in non-growth related costs under Scenario 1, additional capital projects of \$48.6 million and asset management plan provision of \$33.2 million have been included in the forecast.

Section 3.3 of this report presents the capital funding plan for the capital expenditure forecasts under each scenario. In addition, this section presents the impacts of the growth-related and non-growth related capital needs on the Town's reserves and reserve fund balances, and debt financing capacity.

3.2 Summary of Capital Funding Alternatives

The methods of capital cost recovery available to municipalities are provided as follows:

DE COVEDY/METHODO	SECTION			
RECOVERY METHODS	<u>REFERENCE</u>			
 Development Charges Act, 1997 	3.2.1			
 Municipal Act 	3.2.2			
 Fees and Charges 				
 Connection Fees 				
 Local Improvements 				
 Grant Funding Availability 	3.2.3			
 Debenture Financing 	3.2.4			
 Reserves/Reserve Funds 	3.2.5			

3.2.1 Development Charges Act, 1997

The *Development Charges Act* received royal asset on December 8, 1997. The Province's stated intentions were to "create new construction jobs and make home ownership more affordable" by reducing the charges and to "make municipal Council decisions more accountable and more cost effective." The basis for this Act is to allow municipalities to recover the growth-related capital cost of infrastructure necessary to accommodate new growth within the municipality. The Act provides for limitations and ceilings on services that can be included in the charges (e.g. historic level of service caps and ineligible services, such as general administration facilities).

In December 2015, Bill 73 was passed amending the Act. The changes that came into force in January 2016 are more restrictive in some areas (e.g. limited contributions from

developers to those permitted by legislation) while allowing for greater levels of cost recovery in others area (e.g. removed the 10% statutory deduction for Transit Services).

The development charges (D.C.) contained in the Town's 2017 D.C. Background Study were calculated using a cashflow approach, to include the additional financing costs due to the anticipated timing of capital expenditures and pace of development. As such financing of D.C. eligible costs (either through internal interim financing or through the issuance of external debt) were considered in Section 3.3 of this report.

Moreover, the Act allows municipalities to enter into agreements with developers to emplace D.C. projects on behalf of the municipality in exchange for D.C. credits. Similarly, the Act provides mechanisms for front-ending of D.C.s through prepayments or more elaborate developer cost sharing arrangements. Under these types of arrangements, the developer is largely assuming the cashflow implications of capital funding in place of the Town. Town staff will be exploring the use of front-end financing arrangements with developers, however these arrangements have not been included in the LRFP modeling at this time.

3.2.2 Municipal Act, 2001

Part XII of the Municipal Act, 2001 provides municipalities with broad powers to impose fees and charges via passage of a by-law. These powers, as presented in s.391(1), include imposing fees or charges:

- "for services or activities provided or done by or on behalf of it;
- for costs payable by it for services or activities provided or done by or on behalf of any other municipality or local board; and
- for the use of its property including property under its control."

Restrictions are provided to ensure that the form of the charge is not akin to a poll tax. Any charges not paid under this authority may be added to the tax roll and collected in a like manner. The fees and charges imposed under this part are not appealable to the Local Planning Appeal Tribunal (L.P.A.T.).

<u>Under Local Improvement Regulations:</u>

- A variety of different types of works can be undertaken, such as watermain, storm and sanitary sewer projects, supply of electrical light or power, bridge construction, sidewalks, road widening and paving.
- Council can pass a by-law for undertaking such work on petition of a majority of benefiting taxpayers, on a 2/3 vote of Council and on sanitary grounds, based on

- the recommendation of the Minister of Health. The by-law was required to go to the OMB, which might hold hearings and alter the by-law, particularly if there were objections
- The entire cost of a work can be assessed only upon the lots abutting directly on the work, according to the extent of their respective frontages, using an equal special rate per metre of frontage.
- The Local Improvement Act was repealed as of April 1, 2003; and O.Reg. 119/03, made under the Municipal Act, 2001, was enacted on April 19, 2003 which restored many of the previous Local Improvement Act provisions,

The fiscal impact analysis does not assume any additional capital charges or local improvement charges being imposed over the forecast period.

3.2.3 Grant Funding Availability

Federal and provincial funding programs have been made available under the Build Canada Fund, Stimulus Fund and Municipal Infrastructure Investment Initiative Programs. Under the specific requirements of these recent programs, the projects must be "shovel ready" and are allocated on a case by case basis. The one reoccurring source of capital grant funding is Gas Tax funding for municipalities. As such, with respect to the LTFP, Gas Tax funding has been maintained at 2018 levels for the duration of the forecast period to 2027.

3.2.4 Debenture Financing

Although it is not a direct method of minimizing the overall cost to the taxpayer, debentures are used by municipalities to assist with cash flow for implementing large capital projects.

The Ministry of Municipal Affairs regulates the level of debt incurred by Ontario municipalities, through its powers established under the Municipal Act. Ontario Regulations 403/02 provides the current rules respecting municipal debt and financial obligations. Through the rules established under these regulations, a municipality's debt capacity is capped at a level where no more than 25% of the municipality's own purpose revenue may be allotted for servicing the debt (i.e. debt charges). Hence, proper management of capital spending and the level of debt issued annually must be monitored and evaluated over the longer-term period. Presently, the Town's annual outstanding debt payments account for 7.3% of own source revenues. By comparison a survey of Financial Information Returns (F.I.R) for G.T.A. municipalities indicate an average of 3.7%

Through development of the Town's previous LRFP, a debt policy framework was established setting the upper limit for annual principal and interest payments to 10% of the annual net levy. Presently the Town's annual outstanding debt payments account for 9.5% of the net levy.

For debt financing within the LRFP, a 20-year debt term has been assumed at an annual interest rate of 3.7%. In discussions with Town staff, a 20-year debt term was assumed reflecting the size of the capital program in the near term of the forecast, particularly for growth-related capital projects, and the underlying useful life of capital assets being emplaced. The longer debt term has the product of increasing the amount of interest paid. By comparison at an assumed annual interest rate of 3.7% total debt payments would be approximately 18% greater utilizing 20-year debt as compared to 10-year debt.

3.2.5 Reserves and Reserve Funds

Reserves and reserve funds can be established by municipalities to set aside funds to meet a future funding requirement. These funds can be established by Council on a discretionary basis, by by-law of the municipality and/or through legislation. Council has the discretion to set up a reserve or reserve fund for any purpose for which they have the authority to spend money. The distinction between reserves and reserve funds is as follows:

- Reserves are established by Council at their own discretion to be available to
 meet future needs. The "future needs" does not have to be specific
 projects/assets and a reserve can serve multiple purposes. These reserves do
 not have to be segregated from the general revenues of a municipality and
 reserves do not accumulate interest earned on annual balances (unless deemed
 by policy).
- Reserve funds can either be obligatory or discretionary. Obligatory reserve funds
 are created whenever a statute requires that funds received be segregated from
 the general revenues of the municipality (e.g. D.C. Reserve Funds, Building
 Code Act Reserve Funds, etc.). Discretionary reserve funds are established at
 the discretion of Council but normally established by by-law, with funds
 earmarked for a specific purpose. In both cases, the funds accumulate (accrue)
 interest earned on balances which is used to reduce the amount of future
 funding.

For capital and operating funding purposes the Town's reserves have been segregated between capital reserves, D.C. reserve funds, obligatory reserve funds, stabilization

reserves, operating reserves, and trust funds. Detail of the individual reserves within each category is provided in Table 3-3.

The Town is currently undertaking a comprehensive Asset Management Plan, which will determine the long-term lifecycle funding requirements to sustain assets and services. Prior to the identification of those needs, the sufficiency of the Town's capital reserves to fund future capital needs over the long term and operating/sustainability reserves to continue to provide services at an acceptable level of service was assessed. To measure the sustainability of forecast capital and operating reserve/reserve fund balances, a survey of reserve/reserve funds was conducted for all municipalities in the Greater Toronto Area based on F.I.R. reporting. The survey measured capital reserves/reserve funds on a per capita basis, and operating reserves as a percentage of net levy.

Table 3-3
Town of Halton Hills Reserves and Reserve Funds

Reserve/Reserve Fund	Fund No.	Reserve/Reserve Fund	Fund No.

Parkland: Cash-in-Lieu	25	Private Traffic Signal Maintenance Fund	97
	T	Hillcrest Cemetery Cap & Op Reserve	98

Based on the average reserve/reserve fund balances for the surveyed G.T.A. municipalities, the following capital and operating reserve/reserve fund targets have been established for the end of the forecast (i.e. 2027):

- Capital Reserves/Reserve Funds \$540 per capita
- Operating Reserves \$20% of net levy

Regarding the use of D.C. reserve funds within the LRFP, in years when D.C. reserve funds balances are not sufficient to fund eligible D.C. draws the Town has interim financed these needs from non-D.C. sources. It is the Town's practice to repay these interim financed amounts with interest calculated over a 10-year period. The capital funding plans under the LRFP do not anticipate any additional interim financing requirements, beyond those that are currently budgeted for by the Town (i.e. approximately \$1.1 million per year between 2018-2024 from the New Capital Reserve to the interim finance the Recreation and Parks D.C. Reserve Fund). Based on the 10-year repayment period, the outstanding interfund loans obligations from D.C. reserve funds to non-D.C. reserves are anticipated to decrease from \$10.6 million in 2018 to \$3.4 million in 2027.

3.3 Capital Funding Plan, 2018-2027

Tables 3-4 and 3-5 summarize the capital funding plan for Scenarios 1 and 2 respectively. Under each scenario, the following approach to the capital funding plan has been used:

- The D.C. eligible share of growth-related capital needs will be funded from D.C. reserve fund draws where there are sufficient funds to do so. With the exception of \$2.0 million in D.C. eligible capital needs identified to be interim financed from non-D.C. reserves in 2018, where D.C. reserve fund balances are insufficient to fund the D.C. eligible obligations, external debentures are the assumed funding source. External debt payments are forecast assuming 3.7% interest over a 20-year term.
- As discussed in Section 3.2.5, the financial plan intends to achieve a sustainable reserve/reserve fund positions by the end of the forecast period. As such, external debt is the assumed funding source for non-growth related capital needs when capital reserves/reserve fund balances fall below target levels.
- Gas tax funding is contributed into a separate obligatory reserve and has been forecast to be maintained at current levels. However, based on the budgeted draws within the Town's detailed 10-year capital budget, the Gas Tax reserve would have a surplus balance of \$7.9 million at 2027. Gas Tax reserves cannot be in a surplus position, as such this balance may reflect timing differences or may potentially be available to help offset the non-growth related capital external debt requirements. If available to reduce anticipated debt financing, this will have a positive impact on the Town's debt capacity utilization as presented in Section 4.3

 Funding of \$11.3-\$11.8 million in grants, donations, and other contributions, including contributions from other municipalities for their cost share joint infrastructure, has been assumed consistent with the Town's 10-year capital budget.

Section 4.3 of this report summarizes the impacts of additional debt issuance under each scenario on the Town's debt capacity utilization limits.

3.3.1 Capital Funding Plan, Scenario 1

The capital funding plan for Scenario 1 (Table 3-4), provides approximately \$61.2 million in growth-related capital funding from D.C. reserve funds. D.C. related debt financing for capital needs over the forecast period total \$24.3 million. In total, D.C.s account for 27% of total capital funding over the forecast period. The non-growth related capital projects and the non-D.C. eligible share of growth-related capital projects will be funded from the following sources:

- General capital reserves \$186.9 million (61% of the total capital funding);
- Obligatory reserves \$12.5 million (4% of the total funding). The majority of this funding is from Gas Tax Reserve, with a small amount (approximately \$50,000) being contributed from the parkland cash-in-lieu reserve;
- Non-growth related debt \$11.4 million in additional external debt financing (4% of the total funding);
- Contributions, recoveries, and other subsidies \$11.3 million (4% of the total funding); and
- Operating reserves \$167,000 (<1% of the total funding), in capital funding from operating reserves is forecast to occur from the Community Sustainability Reserve.

Scenario 1 assumes an additional \$11.4 million in external debt to fund non-D.C. eligible capital costs. D.C. recoverable external debt incurred over the forecast period totals \$24.3 million. As illustrated in Figure 3-1, the Town's current outstanding debt principal for D.C. and non-D.C debt is \$22.7 million (i.e. \$6.8 million in tax supported debt and \$15.9 million D.C. funded debt), based on the forecast the Town's outstanding debt principal would increase to \$32.8 million by 2027. This will commit future financial resources to the repayment of this debt until it is retired. Again, Figure 3-1 demonstrates the reduction in outstanding debt principal beyond the forecast period, with project debt principal declining to current levels by 2033

Figure 3-2 illustrates the annual principal and interest debt payments over the forecast period, and annual funding commitments for existing debt and additional debt issued over the period. Annual debt repayment obligations for D.C. funded expenditures are funded from the D.C. reserve funds. Debt repayment obligations for tax supported debt (i.e. non-D.C. funded debt) are funded through the Town's annual operating budget. As such these commitments present obligations on future property revenues. As presented in Figure 3-2, annual tax supported debt repayment is currently \$1.6 million and expected to decline to \$0.1 million by 2027. With the additional \$11.4 million in tax supported debt occurring at the end of the forecast period, this increasing the annual debt repayment cost by \$0.8 million in 2028 to be maintained at that level until the end of the debt term (i.e. 2047).

As noted earlier, capital reserves/reserve funds and operating/sustainability reserves have been forecast to meet sustainability targets by 2027, as set out in Section 3.2.5 (i.e. capital reserves/reserve funds of \$540 per capita, and operating reserves of \$20% of net levy). A summary of the reserve/reserve fund balances for the major types of reserves at year-end 2017 and 2027 is presented in Table 3-5. General capital reserves are forecast to increase by from \$27.5 million in 2017 to \$42.6 million by 2027. Operating and sustainability reserves will increase more significantly from \$6.6 million in 2017 to \$20.2 million by 2027. It should be noted however, that outstanding debt payments (principal and interest) at 2027 total \$15.9 million and these balances should be considered in the context of these funding commitments.

Stabilization Reserves	3,659,439	9,781,299			
Operating Reserves	2,941,222	10,448,861			
Trust Funds	5,084,115	3,831,635			

3.3.2 Capital Funding Plan, Scenario 2

The capital funding plan for Scenario 2 (Table 3-6) has been prepared within the limitations of the same net levy forecast as Scenario 1, while targeting the same capital and operating reserve/reserve fund balances for sustainability. Therefore, the \$105.3 million in additional capital costs over the forecast require a greater reliance on external debt financing for both D.C. and non-D.C. funding obligations.

Similar to Scenario 1, for growth-related capital funding from D.C.s will be provided approximately \$61.5 million, representing 14% of the total capital funding. D.C. eligible under this Scenario totals \$30.5 million, 7% of the total funding and \$6.2 million more than Scenario 1.

The remaining \$321.0 of non-growth related capital expenditures and the non-D.C. eligible share of growth-related capital projects will be funded from the following sources:

- Non-growth-related debt \$161.5 million (39% of the total funding)
- General capital reserves \$135.0 million (33% of the total funding);
- Obligatory reserves \$12.5 million (3% of the total funding) same as Scenario 1;
- Contributions, recoveries, and other subsidies \$11.8 million (3% of the total funding); and
- Operating reserves \$167,000 (<1% of the total funding) same as Scenario 1.

Scenario 2 forecasts additional tax supported debt of \$161.5 million. D.C. recoverable debt incurred over the forecast period totals \$30.5 million. The additional debt forecast under this scenario would increase current outstanding debt principal from \$22.7 million to \$172.8 million by 2027. By comparison to Scenario 1, this will further commit future financial resources to repayment of this debt until it is retired, with projected debt principal declining to current levels by 2043.

Figure 3-4 illustrates the annual principal and interest debt payments over the forecast period, and annual funding commitments for existing debt and additional debt issued over the period. As noted above, tax supported debt payments present obligations on future property revenues. As presented in Figure 3-4, tax supported annual debt payments would increase from \$1.6 million currently to \$14.2 million in 2028 with the additional \$161.5 million in debt issuance under this scenario

A summary of the reserve fund balances to achieve the sustainability targets at 2027 is presented in Table 3-7. General capital and operating/sustainability reserves are

forecast to increase at the same rate as in Scenario 1 (i.e. 55% and 206% respectively over the forecast period). It should be noted however, that outstanding debt payments (principal and interest) at 2027 total \$200.9 million and these balances should be considered in the context of these funding commitments.

4. Net Operating Expenditures and Property Tax Impacts

4.1 Introduction

The analysis to follow provides a detailed review of the operating expenditures and revenues arising with growth over the forecast period. The product of the analysis is to assess the property tax rate and debt capacity utilization impacts associated with the overall growth forecast to 2027 as presented in Chapter 2.

It should be noted that the fiscal impacts presented herein are contingent on the timing and cost assumptions as available and understood at the time of preparing the report. The report has been prepared through the development of a LRFP model, which has been constructed to allow Town staff to create alternative scenarios, update assumptions and measure impacts. While the LRFP reflects the Town's current strategic plans, development plans and cost assumptions there are specific assumptions that could impact the report findings. These include:

- The amount, type and pace of development. As identified in Chapter 2, the
 anticipated development within the Town's Official Plan and Region's Best
 Planning Estimates and current assessment samples, produce a 4.2% annual
 growth rate in weighted assessment. At forecast Town property tax rates, a
 reduction in growth would produce less revenue to address the costs of service.
- The Town has the ability to monitor the amount, type and pace of development and adjust capital spending accordingly. Particularly related to the emplacement of capital projects where debt financing is being utilized, financing for these projects will commit future revenues and therefore spending should be carefully correlated with development. Moreover, as indicated in Chapter 3, the Town will be exploring front-end financing arrangements with developers to assist the municipality with cashflow of growth-related capital projects.
- Incremental net operating expenditures are forecast based on the resultant population and employment growth and emplacement of capital to facilitate increased service demands, careful monitoring of development will assist in predicting net operating costs.

4.2 Forecast Operating Expenditures and Revenues

Operating expenditures have been assessed on two different bases: (1) operating costs related to the incremental capital assets identified in the previous chapter, and (2) service/program operating costs required to service the incremental population and employment-related demands. The former identifies the specific operating costs anticipated to be incurred as additional capital assets (i.e. roads, facilities, etc.) are constructed or assumed, based on current maintenance cost of assets (e.g. \$/facility square foot, \$/lane km of road, etc.). The latter identifies service/program expenditures which are linked to population and employment growth at anticipated service levels. In addition to these projections of operating costs, additional capital-related operating expenditures for non-growth capital expenditures and infrastructure constructed developers as a condition of development agreements are also identified.

Operating revenues are assessed for property tax and non-property tax sources. Incremental weighted property assessment, anticipated as a result of residential and non-residential building activity over the forecast period, gives rise to additional property tax revenues. Non-property tax revenues, such as user fees, permits, licences, etc., are generally anticipated to grow in concert with population and employment growth to offset some of the incremental program costs.

In undertaking the analysis of operating expenditures and revenues discussed above, operating expenditures and revenues such as transfers to/from reserves and debt repayment have been excluded as these are addressed separately in the analysis.

It is noted, that for the purposes of the net operating expenditure forecast, operating expenditures and revenues have been forecast assuming 2% annual inflation.

The operating cost analysis was undertaken using the Town's 2018 Operating Budget, and detailed discussions with Town staff. Annual operating expenditures forecasts for Scenarios 1 and 2 are provided in Tables 4-2 and 4-3 respectively. Forecast annual non-tax revenues are provided in Table 4-5 for Scenario 1 and Table 4-6 for Scenario 2. These tables are based upon service categories identified by the Town to align with asset management reporting categories, and include operational expenditures net of debt charges and transfers to other funds (i.e. capital fund and reserve fund), as well as non-tax revenues net of contributions from reserves.

4.2.1 Service/Program Related Operating Expenditures

Table 4-1 summarizes the operating expenditures for each service category, based on population and employment-related benefits. The cost per capita and per employee have been adjusted based on anticipated economies of scale and changes in service levels over the forecast period. Based on this assessment, annual service/program operating expenditures total approximately \$354 per capita and \$268 per employee. In addition to forecast service/program operating expenditures based on the 2018 Operating Budget, additional operating costs have been identified for each Scenario, these are summarized as follows.

Table 4-1
Program Related Operating Expenditure Assumptions

Sgram Rolaton Open	Program Related Expenditures								
	P	er Capita	Per	Employee					
Category	%	\$	%	\$					
Administration	78%	128.37	22%	128.37					
Corporate Revenues	78%	0.10	22%	0.10					
Long Term Planning	78%	-	22%	-					
Recreation & Culture	95%	86.01	5%	15.90					
Library Services	95%	0.36	5%	0.07					
Fire Services	78%	9.43	22%	9.43					
Transportation & Transit	78%	65.85	22%	65.85					
Planning & Development	78%	31.46	22%	31.46					
Parks & Open Space	95%	18.49	5%	3.42					
Environmental Services	78%	13.85	22%	13.85					
Total		353.92		268.45					

Scenario 1 (2018\$)

- \$75,000 annual expenditure increase in youth program spending;
- \$110,000 annual expenditure increase in providing Activan Services in house;
- \$224,000 annual expenditure decrease in the provision of Fire Communication Services; and
- \$33,000 annual expenditure decrease related to the removal of vacancy rebates provided by the Town.

Scenario 2 (2018\$)

- In addition to those identified in Scenario 1;
- \$5.5 million annual expenditure increase in operating and maintenance costs of providing an expanded transit service by 2027; and

• \$780,000 annual expenditure increase associated with adding eight additional full time equivalent (FTE) Town staff positions in 2019.

By 2027 incremental service/program related operating expenditures, and other noted changes in operating expenditures, will total \$10.6 million under Scenario 1. Under Scenario 2 incremental service/program expenditures over the forecast period total \$17.1 million. The increase in service/program related operating costs are largely a product of increased staff requirements to provide services. Based on the current average staff costs per FTE position within the Town, it is anticipated that an additional 133 FTE positions would be required under Scenario 1, with 141 additional FTEs required under Scenario 2. Relative to current staffing levels, this represents an increase of approximately 36-38% by the end of the forecast period.

4.2.2 Facility-Related Operating Costs

Provided below are the five components that facilities have been categorized into for calculating facility-related operating costs, and the 2018 budgeted operating costs per item:

- Expenditures per sq.ft. for buildings
 - o Administration \$11.77 per sq.ft.
 - o Recreation & Culture \$11.90 per sq.ft.
 - Library Services \$91.87 per sq.ft.
 - o Fire Services \$4.68 per sq.ft.
 - o Transportation and Transit \$2.64 per sq.ft.
- Expenditures per lane km for new lane kilometres of roads (arterial, collector and local)
 - o Transportation and Transit \$10,000 per lane km
- Expenditures per acre for parkland
 - o Parks & Open Space \$10,000 per hectare
- Expenditures per km for trails development
 - Parks & Open Space \$2,000 per km
- Expenditures per vehicle for various vehicles
 - o Fire Services \$3,875 per vehicle
 - o Transportation and Transit \$24,426 per vehicle
- Expenditures per storm pond
 - o Environmental Services \$3,000 per pond

It is noted that the facility costs per sq.ft. differ somewhat between categories of service. This is primarily due to the attribution of salary, wage and benefit costs to assets and

services/programs. The unit costs are based on current service levels, or in some cases, have been provided by staff where budgeted operating costs for new infrastructure is greater than the current average. This occurs where the physical form of the new infrastructure requires a greater maintenance service level that currently provided on average (e.g. roads, trails, parks).

By 2027 the incremental increase in facility-related operating costs will total \$8.4 million under Scenario 1, and \$11.9 million under Scenario 2.

4.2.3 Service/Program Related Non-Tax Revenues

Non-tax service/program revenues (e.g. user fees, licenses, etc.) are presented in the same format as service/program related operating expenditures in Section 4.2.1. Table 4-4 details the service/program related operating revenues per capita and per employee.

Table 4-4

Environmental Services	78%	(4.07)	22%	(4.07)
Total		(126.21)		(89.20)

Some revenues are less sensitive to growth and will not change significantly with the growth of the Town, whereas other are related to activity within the Town and will change with growth. The assumptions regarding sources of non-tax revenue are based on 2018 Budget levels and have been allocated between residential and non-residential, based upon employment and population levels. Annual service/program operating revenues total approximately \$126 per capita and \$89 per employee. In addition to forecasting operating revenues for program and service growth, discussions with Town staff revealed additional non-tax revenue impacts for inclusion:

Scenario 1

- 1% annual increase in Payments-in-Lieu taxation revenue, consistent with recent trends witnessed within the Town;
- \$19,400 annual decrease in contributions from other sources for seniors recreation services; and
- 75% increase in annual planning application revenues resulting of the approval of planning application fees.

Scenario 2

- In addition to those identified in Scenario 1;
- \$665,000 annual revenue decrease arising from the redemption of the LDC promissory note; and
- \$1.1 million annual revenue increase in transit service revenues, based on the current relationship of revenue to operating costs of universal transit services.

In aggregate, incremental non-tax service/program related revenues total \$1.5 million by 2027 under Scenario 1. Under Scenario 2, incremental non-tax service/program revenues would total \$2.7 million by 2027.

4.2.4 Facility-Related Non-Tax Revenues

While the majority of non-tax revenues are anticipated to occur as a result of population and employment growth and the increase in demands for services, some non-tax revenues are more attributable to the availability of assets (e.g. facility space or parkland) for rentals and bookings. As such, the following annual operating revenues per unit per unit have been assumed:

- Library facility space \$1.58/sq.ft.
- Recreation facility space \$7.93/sq.ft.
- Roads and related \$10,000/lane km
- Parks \$2,070/ha

As summarized in Tables 4-5 and 4-6 for Scenarios 1 and 2 respectively, the capital-related revenues that will be produced as a result of increases in incremental assets and their use will total approximately \$0.6 million under Scenario 1, and \$1.2 million under Scenario 2.

4.3 Fiscal Impacts

The following subsections summarize the fiscal impacts over the forecast period in terms of net operating expenditures, capital-related operating requirements, property tax rates, and debt capacity utilization levels. The information summarized in the following sections is detailed in Table 4-7 for Scenario 1, and Table 4-8 for Scenario 2.

4.3.1 Net Operating Expenditures

Scenario 1

- Gross operating expenditures are forecast to increase by 4.0% annually over the forecast period, from \$60.9 million in 2018 to \$90.3 million in 2027.
- The incremental increase in operating expenditures of \$29.4 million, comprise \$19.0 million in increase costs of service, as identified in Table 4-2, and \$10.3 million in inflationary cost increases to the base budget.
- Non-Tax revenues are anticipated to increase by 1.4% annually over the forecast period, from \$29.3 million in 2018 to \$33.7 million by 2027.
- The incremental increase in non-tax revenues of \$4.4 million, comprise \$2.1 million in cost recovery for incremental service demand, as identified in Table 4-5 and a \$2.3 million assumed price inflation to the base budget.

In aggregate, excluding of capital-related operating expenditures, net operating expenditures are forecast to increase by 6.0% annually, adding \$24.9 million to the net levy by 2027.

Scenario 2

- Gross operating expenditures are forecast to increase at a greater rate (5.1% annually) than in Scenario 1, due to the greater amount of incremental operating costs of service (i.e. \$29.0 million in Table 4-3 compared to \$19.0 million in Table 4-2).
- Non-Tax revenues are forecast to increase by 2.0% annually, primary due to the inclusion of additional transit revenues resulting from the provision of an expanded transit service and cost recovery from increase service demands (i.e. \$3.9 million in Table 4-3 compared to \$2.1 million in Table 4-2).

In aggregate, excluding of capital-related operating expenditures, net operating expenditures are forecast to increase by 7.4% annually, adding \$33.0 million to the net levy by 2027.

4.3.2 Transfers to Reserves and Annual Debt Payments

In addition to changes in net operating expenditures, the increase in the net levy is impacted by changes to the annual transfers to and from reserves/reserve funds and changes to carrying costs of outstanding debt.

Scenario 1

- The 2018 Operating Budget includes \$11.1 million for transfers to general capital and operating/sustainability reserves. To achieve sustainability targets and fund capital needs, by 2027 this amount is forecast to increase by \$26.7 million.
- Annual costs of principal and interest for the repayment of outstanding debt total \$4.6 million in 2018. By 2027, most of the Town's existing debt will be repaid, with approximately \$0.5 million in annually debt payments remaining. However, \$35.7 million in additional debt requirements (D.C. and non-growth capital related) will add \$2.1 million in annual principal and interest payments by 2027. In aggregate, total debt payments would decrease by approximately \$2.0 million by the end of the forecast period.

Scenario 2

- Incremental transfers to reserves/reserve funds by 2027 for long term sustainability are less in Scenario 2 (\$8.5 million vs. \$26.7 million in Scenario 1).
 This is explained by the decrease in transfers to general capital reserves being offset by lower capital draws over the period and a greater reliance on external debt financing (i.e. shifting the capital funding mix from reserves/reserve funds to debt).
- In addition to the \$0.5 million existing annual debt payments remaining by 2027, incremental principal and interest costs associated with \$192 million in debt requirements will add \$12.1 million in annual debt servicing costs. In aggregate, total debt payments under Scenario 2 would increase by approximately \$8.0 million by 2027, as compared to a \$2.0 million decrease under Scenario 1.

4.3.3 Property Tax Impacts and Debt Capacity Utilization

Town of Halton Hills property tax rates have increased by approximately 3.9% annually over the past three years (2016-2018), with greater increases in the two years prior of approximately 4.9% annually. To measure the fiscal impacts, the LRFP forecast Town property tax rate increase of 3.9% annually for each Scenario. Moreover, as each scenario also maintains the same sustainable reserve/reserve fund target balances for 2027 (i.e. capital reserves/reserve funds of \$540 per capita, and operating reserves of \$20% of net levy). As such, the difference in the fiscal impacts of the two scenarios is

measured on the basis of external debt requirements and debt capacity utilization levels.

As noted in Section 3.2.4, a maximum of 25% of a municipality's own source revenues may be used for the servicing of debt. The Town has also established an internal debt policy framework limiting annual debt servicing costs to 10% of the net levy. Currently the Town's annual debt servicing costs represent 7.3% of own source revenues or 9.5% of net levy, indicating that the while the Town may issue more debt within the provincial policy limit, they are approaching their internal borrowing limit.

The impact on the Town's debt capacity utilization measures under each Scenario at the end of the forecast period (2027) are as follows:

Scenario11

- % of Own Source Revenues 2.1%
- % of Net Levy 2.5%

Scenario 2

- % of Own Source Revenues 10.4%
- % of Net Levy 12.5%

Due to the increased use of external debt as a capital funding source under Scenario 2, the Town would be expected to exceed their internal borrowing limit of 10% of net ley, while remaining well below the provincial limit set at 25% of own source revenues. However, by comparison to current surveyed G.T.A. municipal practice, where debt repayment relative to own source revenues averages 3.7%, Scenario 2 would exceed this current average.

-

¹ By comparison, if the Town issued 10-year term debt, the impacts would be 4.4% of own source revenues and 5.3% of net levy.

5. Observations and Conclusions

The analysis provided herein contains the Town's 2018-2027 long range financial plan, which addressing the capital and operating needs of the community over time with development, as well as provisions for asset management lifecycle costs of Town assets. The basis for the forecast capital needs of service arise from the Town's D.C. Background Study, 2018 Capital Budget and forecast, and detailed discussion with Town staff. Moreover, discussion with Town staff identified additional items to be considered within the ten-year plan regarding additional anticipated capital needs, operating expenditures, and levels of service.

In this regard, the analysis considered two scenarios:

- **Scenario 1**, which largely reflects the Town's current plan, with some minor additions for actual and anticipated near-term projects; and
- **Scenario 2**, which includes \$105.3 million additional capital projects and \$8.1 million in additional net operating expenditures by 2027.

The LRFP for each scenario was prepared within the construct of maintaining a 3.9% annual Town property tax rate increases, consistent with recent trends, and achieving sustainable capital and operating/sustainability reserve balances by 2027 (i.e. capital reserves/reserve funds of \$540 per capita, and operating reserves of \$20% of net levy).

Maintaining average annual property tax rates and end-of-term reserve/reserve fund sustainability balances, provides for the measure of fiscal impacts on the basis of increased debt and it's implication on the Town and Province's debt capacity limits.

Planning under Scenario 1 allows the Town to construct infrastructure and provide services to the growing community while maintaining historical tax rate increases, improving reserve/reserve fund sustainability and lowering the indebtedness. Under this scenario, debt servicing as a percentage of net levy to decrease from 9.7% in 2018 to 2.5% by 2027.

Planning under Scenario 2, while again maintaining historical tax rate increases and improving reserve/reserve fund sustainability, the capital fund mix would be altered from Scenario 1 such that there would be a greater use of debt financing. Under this scenario, the Town would incur \$192 million in additional debt, as compared to \$36 million under Scenario 1. As a result, the Town would exceed their internal debt policy limit of 10% of net levy, with annual debt servicing costs reaching 12.5% of the net levy at 2027. However, the Town would still be within the Province's annual debt repayment

limits, at 10.4% of own source revenues (Provincial requirements limit debt repayment to 25% of own source revenues).

While the level of debt required under Scenario 2 is significantly larger than under Scenario 1 and outstanding debt obligations at 2027 may produce capital funding limitations beyond the forecast period, this scenario provides funding for many strategic initiatives that Council may wish to consider, in whole or in part, including:

- Construction of the Gellert Community Centre Phase 2 (2023) for \$11.5 million;
- Construction of the Georgetown and Acton Indoor Pool projects (2020) for \$10.5 million:
- \$1.0 million annual capital expenditures between 2019-2027 for potential needs arising from the forthcoming IT Strategy Plan;
- Town Hall expansion in 2023 for \$2.5 million;
- Expansion of the Activan transit service and the additional of universal transit services (vehicles, transfer hubs, facilities, etc.) between 2019-2027 for \$36.0 million:
- Sale of Town owned lands (\$11 million) and facilities (\$1.2 million) between 2018-2019;
- Redemption of the LDC promissory note for \$16.5 million in 2021;
- \$33.1 million in funding of asset management needs to achieve recommended annual funding levels; and
- Eight additional full-time equivalent (FTE) staff in 2019 beyond forecast growthrelated needs in Scenario 1.

In conclusion, the Town's financial plan and associated policies are achievable within a 3.9% annual Town property tax rate increases based on the underlying growth assumptions. Depending on the strategic initiatives chosen by Council (i.e. all or some items identified in Scenario 2), this level of property tax support would allow the Town to fund future service demands, increase sustainability and funding for municipal assets and services, and potentially improve the municipalities level of indebtedness (as measured by the Town's policy of annual debt repayment relative to the net levy).
